

# BSDS Assignment 3

---

Shujian Wen, Wenbo Wang

## Results

---

- Codes are available at my github repo: [https://github.com/Greatjian/CS\\_6650\\_distributed\\_system](https://github.com/Greatjian/CS_6650_distributed_system)

	<b>32</b>	<b>64</b>	<b>128</b>	<b>256</b>
aws (assignment 2)	521	555	697	1127
aws lambda	812	906	1089	1296
gcp	377	423	525	887
gcp load_balancing	387	414	526	893

- From the table, we can see:
  - gcp (without lb)  $\approx$  gcp (with lb) < aws < aws lambda
  - load balancing contributes little work
  - gcp has an upper limit of 2500 throughput at 256 threads (see pic below)

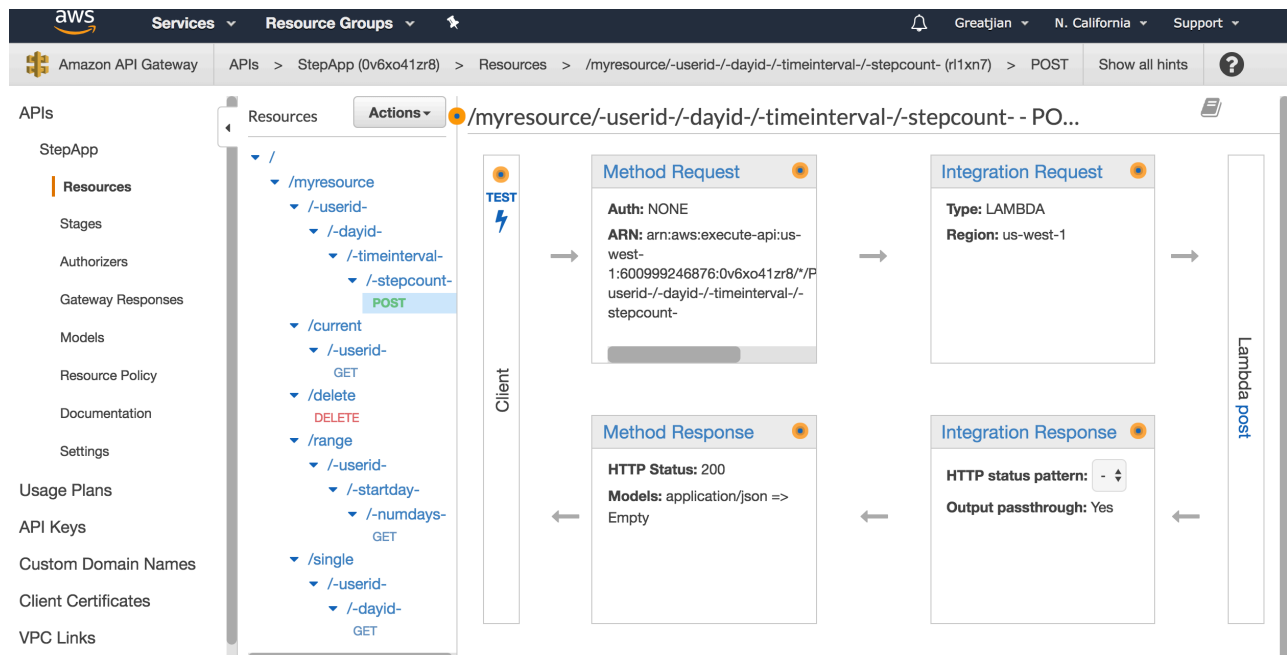

## AWS Lambda

---

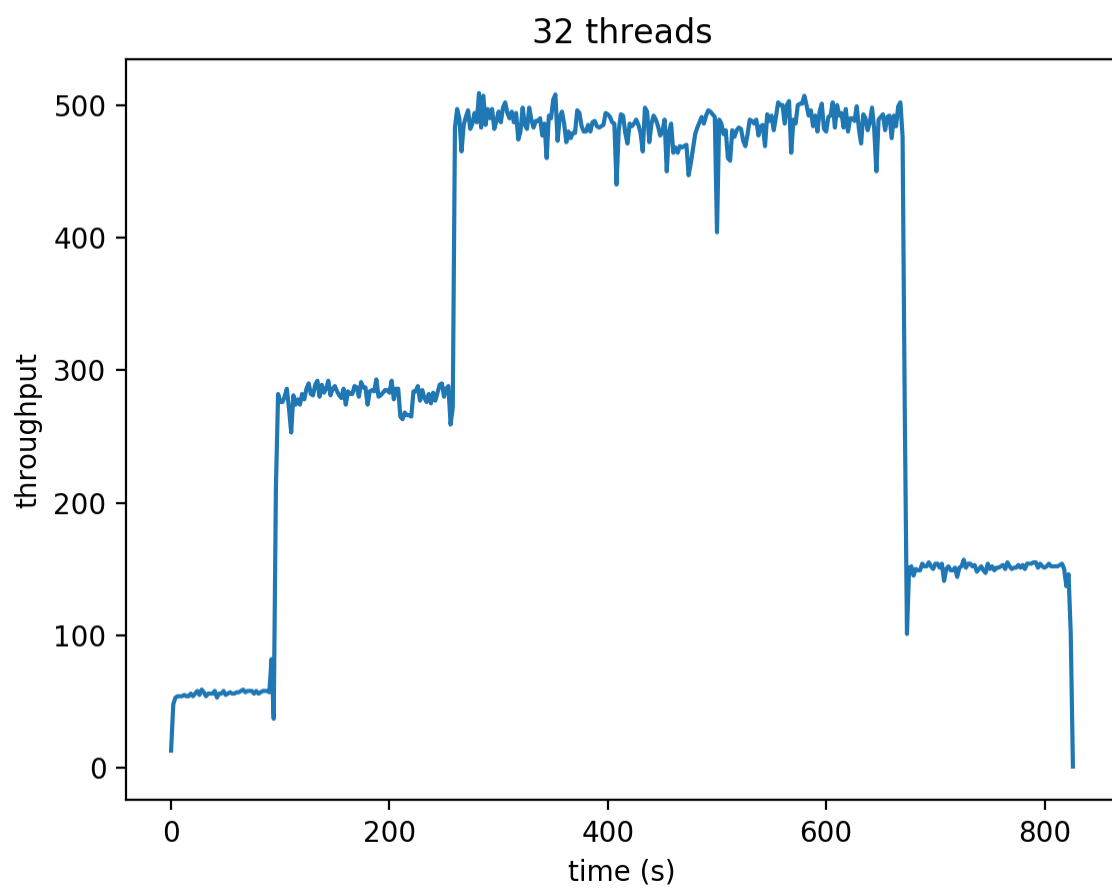

- eclipse setup

- use API gateway to implement requests

- throughput

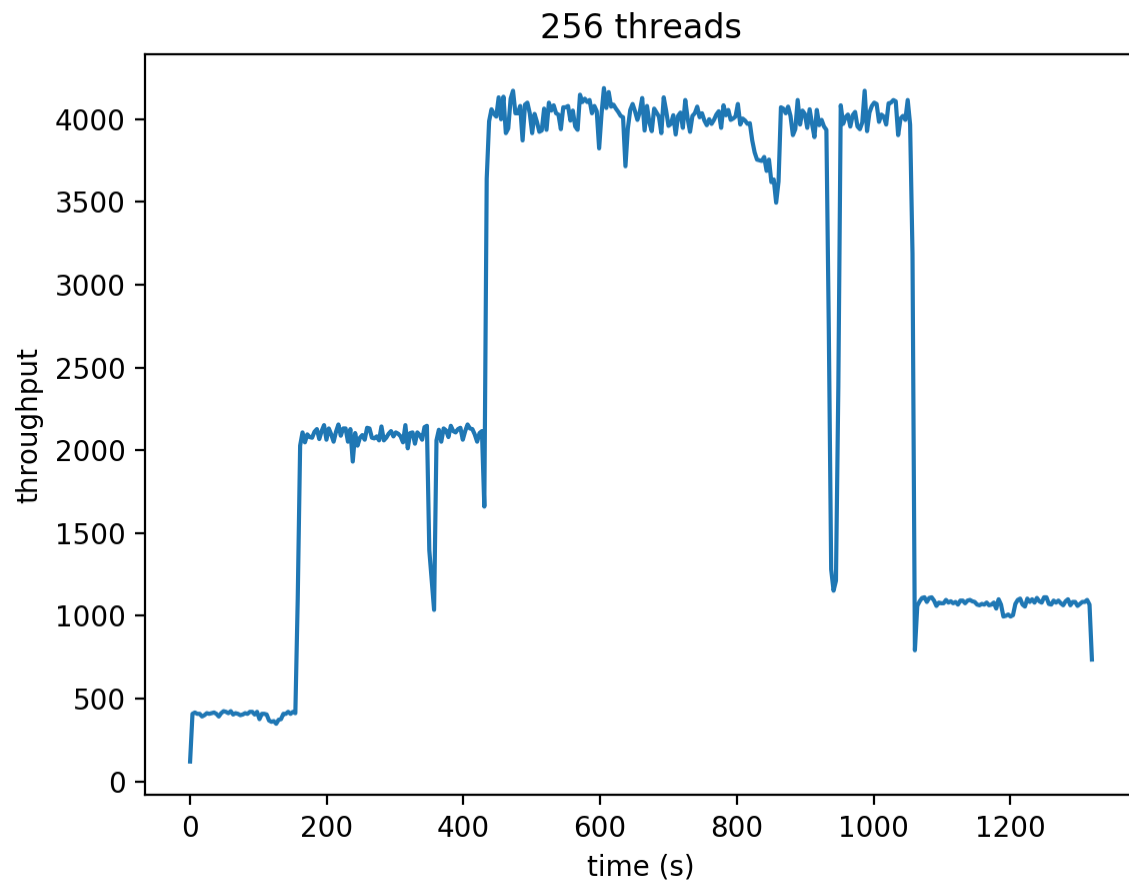

64 threads

128 threads

## GCP

- without load balancing

```
Run Main
